Collaboration  
Open Source  
Community  
Reuse  
Ownership  
Cohesiveness  
Open Content  
Digital solutions  
Demand controlled  
Programming strength

## OS2 is a community which focuses on:

**Openness** – transparency is key in an open community.

**Collaboration** – we are better and stronger if we unite.

**Sharing** – knowledge and good solutions should not be proprietary.

**Digital development** – we want to be frontrunners where relevant.

**IP ownership and open source licenses** – prevents vendor lock-in.

Founded in 2012 by 5 municipalities

We are now 57 members –  
More than half the  
Danish municipalities

## Organisation

OS2 is organised into members (public authorities) and partners (suppliers) who collaborate on creating the best possible digital solutions.

All members are equal and get a vote on the highest decision-making body, the yearly general assembly. In between the board is the highest decision-making body in OS2.

Daily operations is managed by a full time Business Manager whom is funded by a yearly membership fee, currently EUR 2.400 per member.

OS2 sets out to innovate, create and share solutions and results that might be relevant for other public authorities.

OS2 situates itself in the gap between solutions created by or on behalf of government, municipalities or suppliers.

This entails that OS2s products and projects might not be relevant for all public authorities. But it does not have to be aimed at all 98 municipalities; as long as a few municipalities sees a gap in the market and want to join forces to fill it - OS2 is the hub that ensures that it happens.

## OS2 is valuable because:

There is a very **short time from idea to market**.

Shorter **ROI** and lower **TCO**.

Precise and **clear specifications** ensure a short development process and low costs.

Public authorities **contribute actively** in the community.

**Well documented** project management model and governance.

# Selection of OS2 Products

**OS<sup>2</sup>**mo

System to govern organisation units and employees.

**OS<sup>2</sup>**kitos

Record system for portfolio management of systems, contracts, projects and interfaces.

**OS<sup>2</sup>**webscanner

Informations security scanner to ensure compliance with regulations on protection of data.
